

ECOS Release Notes 4.12

Expand the size of the general recall notification text: Change the maximum size restriction of the general notification text from 300 characters to 1000 characters. The targeted notification text also has a maximum of 300 characters and that will remain as is.

Allow for the upload of recall instructions other than (.doc): FNS would like to be able to choose other types of documents (PDF, image files, spreadsheets) to be uploaded as well. **The final list is: TXT, GIF, BMP, HTM, CSV, PDF, XLS, JPG, DOC.**

Unable to delete delivery orders from a recall case: Fix the logic where delivery order(s) that are removed are removed from the Delivery Orders list. If the user saves, the change becomes permanent (orders are permanently removed); if the user cancels, the orders are not removed from the case.

Add Max length edit for description on 'Save Requisition' page: Set a maximum length of 64 for the Requisition Name textbox on the Save Current Requisition page, so that the user cannot type past 64 characters.

Change report headings on 'Recall Response' report: Change report headings to match page changes for data tags.

Change 'FROM' line on Varolii email for Self registered users: Changed to CommodityAlertSystem@fns.usda.gov

Adjust tag names on 'Recall Response' form: Changed tag names to match what was being reported on the spreadsheet for reporting of recall data.
