

NAFDPIR 2007

AIS

AIS was recently updated (version 06.2007) to add the commodity code A404 – Canned Mixed Fruit. Within the next 2 months another AIS update will be released that will provide compatibility with Microsoft's newest operating system – Windows Vista.

In addition to support for Windows Vista, the following are examples of some of the features that have been added to AIS with the next update:

Inventory System

A graphical view option is available for the entire Inventory System.

Examples:

Inventory System Menu

INVENTORY SYSTEM MENU

1. COMMODITY TRANSACTION
2. VOID COMMODITY TRANSACTION
3. VIEW COMMODITY STATUS
4. CUSTOMIZE COMMODITY CODE NAMES
5. SET COMMODITY TO USE UNITS ONLY
6. BARCODE SYSTEM MENU
7. RETURN TO WELCOME MENU

ENTER MENU SELECTION:

Inventory System Menu

VIEW COMMODITY STATUS

Tran Date	Code	Name	Units/Case	Unit Size
6 4 2007	A057	MIXED VEGETABLES	24	#300 CAN

AIS Data Maintenance

The AIS Data Maintenance application will be modified to specifically target using larger volume removable storage such as memory sticks (jump drives, thumb drives, etc). Agencies are being encouraged to migrate away from older backup technologies with capacity limits such as ZIP Drives and CD-RW's towards the cheaper and easier to handle large capacity memory sticks. Currently, a 1GB memory stick costs about the same as a 10 pack of CD-RW's and has enough capacity to do a 5 day backup on one stick. The memory sticks require no special formatting and are very compatible from one computer to the next running Windows 2000, XP or Vista.

Gone will be the black and white script window displaying files being backed up replaced with a graphical display indicating the % of backup completed. Another feature is that the AIS Data Maintenance will now backup each day into its own folder by day of the week and provide a display to indicate what the date of the backed up data is. This will enable for easier restoration processes if needed.
